

What is claimed is:

1. A decorative structure comprising:
a first runner;
a second runner spaced substantially parallel to the first runner;
a spreader bar spaced between and operatively connected to both the first and second runner; and
a flexible panel operatively connected to both the first and second runner.
2. The decorative structure of claim 1, further including a channel positioned within the first and second runners.
3. The decorative structure of claim 2, further including an attachment clip engaging the channel positioned within the first and second runners.
4. The decorative structure of claim 3, wherein the attachment clip engages and attaches the flexible panel to the runners.
5. The decorative structure of claim 2, further including a modular spacing bar engaging the channel positioned within the first and second runners and the flexible panel whereby at least two adjacent decorative structures can be connected.
6. The decorative structure of claim 1, wherein the decorative structure is suspended from a ceiling.

7. The decorative structure of claim 6, further including cables attached to the ceiling and the spreader bar.

8. The decorative structure of claim 1, wherein the first and second runners include a curved portion.

9. The decorative structure of claim 8, wherein the curved portion of the first runner is substantially similar to the curved portion of the second runner.

10. The decorative structure of claim 1, further including a slotted member resting within a groove in the runners whereby the spreader bar is attached to the frame elements by the slotted member.

11. A ceiling system comprising:
a plurality of decorative structures suspended from a ceiling wherein the decorative structures comprise a frame, a panel and a clip attaching the panel to the frame; and
a modular spacer bar attached to and positioned between at least two adjacent decorative structures.

12. The ceiling system of claim 11, wherein the frame comprises at least two parallel runners.

13. The ceiling system of claim 12, wherein the parallel runners include channels wherein the clip is seated.

14. The ceiling system of claim 12, further including a spreader bar spaced between and operatively connected to both the parallel runners.

15. The ceiling system of claim 14, further including a slotted member operatively connected to each of the parallel runners for connecting the spreader bar to the parallel runners.

16. The ceiling system of claim 14, wherein the decorative structure is suspended on wires connected to the ceiling and the spreader bar.

17. The ceiling system of claim 14, wherein the decorative structure is suspended by posts connected to the ceiling and the spreader bar.

18. The ceiling system of claim 11, wherein the parallel runners include a curved portion.

19. The ceiling system of claim 18, wherein the curved portions of the runners are substantially similar.

20. The ceiling system of claim 11, wherein the flexible panel is comprised of a material selected from the group consisting of metal, wood, plastic and fiber board.
